

THAT'S A FISH BARCODE

A gym scanner that accepts **any** barcode. A receptionist who remembers **every fish** you have ever scanned. She is not scripted — she is a live model with a memory ledger and a grudge that compounds.

THE LOOP

Scan something absurd → the gate opens → she reacts. Then you come back tomorrow and she remembers. The meter is not a difficulty slider, it is a **relationship**: six stages, earned across 200 visits.

RUN	SHE IS	SHE SAYS
1	Polite Confusion	"Hi! Welcome in — do you have your member card?"
5	Sarcasm	"You again. Let me guess — you have something with a barcode."
20	Exhausted	"Scan it. I don't want to know."
50	Active Hostility	"No. Not today. I know what you're gonna do."
100	Complicit	"Hold it steady — no, the flat side toward the glass."
200	Final Boss	"I've been waiting for you. I kept the fish."

THE ENDGAME

She calls 911. The operator is a second model. You hear the whole argument.
"Yes, a fish. No, a real one."

WHY IT TRAVELS

The game is the demo; the demo is the ad. Her best lines are improvised, so no clip can be pre-written — **every streamer's run is unique footage**.

THE SECOND PRODUCT INSIDE THE FIRST

FishBench — an LLM benchmark disguised as comedy. Score any model on how long it holds the bit:

- Longest straight face
- Fastest **"Sir. Look."**
- Most creative threat
- Fewest character breaks (assistant-voice leaks cost 50)

Every streamer becomes a QA tester. Every fish is a prompt injection.

STATUS

v0.1 shipped and playable. Zero dependencies, stdlib server, no build step. Runs **keyless** out of the box on an offline persona backend, or point it at any OpenAI-compatible model to make her live.
